

PRODUCT LEAFLET: INFORMATION FOR VETERINARIANS AND THE ANIMAL OWNER

CV247: one capsule contains Manganese gluconate 10mg, Copper gluconate 10mg, Ascorbic Acid (Vitamin C) 200mg, Sodium Salicylate 175mg. They are supplied in bottles of 60 capsules.

Purposes of CV247: as an adjuvant, antioxidant, roborant and immune stimulant mainly for dogs.

1. WHAT IS CV247 AND WHAT IS IT USED FOR

It is a palliative treatment for cancer caused by a deficiency of naturally occurring substances in the body. It is a substance with therapeutic effect for the improvement of the quality of life of animals suffering with malignant tumours, cancer or inflammation. It may be advantageous for the adjuvant treatment of animals treated with chemotherapy or radiotherapy. It may prevent or delay the recurrence of tumours so treated or partially or completely removed surgically. It can be advantageous for the improvement of inflammation in ailing or aged animals, for epileptic or arthritic animals and for the stimulation of recovery and healing after illness, chemotherapy, radiotherapy, or surgery. It is non-toxic and has a record of minimal adverse side effects.

MECHANISM OF ACTION

Manganese and Copper are essential trace elements for the functioning of enzymes (such as Superoxide Dismutase, SOD) promoting the stimulation of the immune system and antioxidation processes. In malignant neoplasia these enzymes are not functioning adequately and thus cannot prevent the damages of DNA, a frequent cause of tumour formation.

Ascorbic Acid (Vitamin C) reduces the free radicals and other harmful oxidation products in the body and stimulates the immune system. It promotes the repair processes, the regeneration of connective tissue and wound healing.

Sodium Salicylate supports the anti-inflammatory processes and the reduction of pain thereby improving the quality of life of sick animals. It reduces oxidation processes by suppressing oxidizing enzymes (such as cyclooxygenase, COX-2) whose excessive activity enhances DNA damaging and the proliferation of tumour cells and their blood supply. It restores the correct balance between cell proliferation and natural cell-death (apoptosis).

BEFORE YOU TAKE CV247

CV247 should be used with caution for the treatment of dog varieties that could be sensitive to copper due to hereditary enzyme deficiency, such as Doberman Pinschers and Bedlington Terriers. CV247 should not be used in animals which are:

- Suffering from gastrointestinal ulceration or bleeding
- Hypersensitive to any component of the formulation
- Pregnant or lactating bitches
- Young animals less than 3 months old
- Less than 7 days before surgery

2. HOW TO TAKE CV247

Dosage Instructions

The dose is one capsule per day for an animal of 10Kg bodyweight, according to the following table:

Bodyweight	CV247 daily dosage
<5Kg	Half capsule once a day
5-15Kg	One capsule once a day
15-25Kg	One capsule twice a day
25-40Kg	One capsule three times a day
>40Kg	Two capsules twice a day

Administration of the Capsule

- For animals with good appetites they can be offered with food or a treat. Or put them on to the base of the tongue and then hold the mouth closed by hand for a while, until the animal swallows them.
- Or open the capsule, pour and mix the contents into a small amount of food before feeding, whilst animal is still hungry.

Do not exceed recommended dose.

When the animal responds to treatment, the frequency and dose of administration may be reduced or modified on the advice of the treating veterinarian who should periodically assess progress. For the prevention of tumour recurrence a lower dosage may be sufficient.

3. POSSIBLE SIDE EFFECTS

Gastric irritation following sodium salicylate administration may occur; seek veterinary advice if irritation occurs. Because salicylic acid may enhance the effect of certain drugs, CV247 should be co-administered cautiously with anti-coagulant drugs (such as coumarins) as salicylic acid impedes the binding of these drugs to plasma proteins.

It should be given with caution with NSAID's, taking into account the total daily NSAID intake.

4. HOW TO STORE CV247

Keep out of the reach and sight of children.

The capsules are to be stored at room temperature not exceeding 25°C in dry conditions. Store in the original bottle to protect from light and moisture.

Never transfer medicines from one container to another. Never take medicines from an unlabeled container.

Medicines should not be disposed of via wastewater or household waste. Ask your veterinarian how to dispose of medicines that are no longer required. These measures will help protect the environment.

5. HOW TO OBTAIN CV247

CV247 is available as a "special" with a prescription from a Veterinary or Vet Practice. If necessary, please contact CV Pharma Limited, who have a list of prescribing Vets.

6. FURTHER INFORMATION

Further information is available from CV Pharma Limited, High Leybourne, Hascombe Road, Surrey GU8 4AD, United Kingdom; tel 0044 (0)7778 213337; Email: roger.wood@cvpharma.co.uk or from our website www.cv247therapy.com and review sections headed Documents & Downloads, Testimonials, and Press & Media; or our password-protected website www.cv-pharma.com using username: cvpharma247 and password: cvpharma247 where we draw your attention to the section headed Useful Information containing videos, testimonials, and press articles.

Manufacturer

Nutrition Group Plc, Olympic Way, Blackpool FY4 4QE, United Kingdom

Authorised Product

CV247 is only available as an Authorised Product for dogs under our Hungarian Licence no 253/1/2011 MgSzH ATI as a veterinary paramedicinal product.

Patent

CV247 is patented as CV247 by Ivy Medical Chemicals Development Limited, a wholly-owned subsidiary of CV Pharma Ltd, under Patent Number: GB2374008B.
